

Functional Unit

Scenario name:	UHT
Product:	Toronto - 8 oz. Recycled Cotton Shopper Tote Bag
Primary Material:	
Scope:	Cradle - Gate

Total Results

3.4761

3.2469

27.0417

Main Environmental Indicators

The increase in the average global temperatures for 100 years as result of greenhouse gas (GHG) emissions. The greatest contributor is generally the combustion of fossil fuels such as coal, oil, and natural gas. Divided into 3 subcategories based on the emission source: (1) fossil resources, (2) bio-based resources, and (3) land use change.

Results:	3.4761	Kg Co2-eq
Benchmark:	3.4577	Kg Co2-eq
Savings %:	-0.5323	
Avoided:	-0.0184	Kg Co2-eq

The withdrawal of water from lakes, rivers or groundwater can contribute to the 'depletion' of available water. The impact category considers the availability or scarcity of water in the regions where the activity takes place, if this information is known.

Avoided:	3.8883	m ³ world eq. deprived

Use and transformation of land for agriculture, roads, housing, mining or other purposes. The impacts can vary and include loss of species, of the organic matter content of soil, or loss of the soil itself (erosion). This is a composite indicator measuring impacts on four soil properties (biotic production, erosion resistance, groundwater regeneration and mechanical filtration).
